# IProcess Manager

BPM Solutions

The Company's mission is to research, develop and distribute business process software that is easy to use, increases efficiency and is competitively available to any size company in any industry.

IsoWare Business Process Management Module (IWPM)

IsoWare Process Management (IWPM) provides powerful business process management (BPM) that integrates information, processes and people in the entire BPM life cycle, from design and simulation to deployment and optimization. **IWPM's** environment requires the user to have no IT knowledge and virtually requires no training.

# flexible solutions for your business needs

IsoWare

is a management tool. It is a tool for easy introduction, creation, implementation, control, auditing and maintenance of business processes. It provides instant distribution and is a prime tool for **ISO Certifications** and for**LEAN** process descriptions.

IsoWare Reporting Module (IWRM)

IsoWare IWRM offers a comprehensive software solution for an effective quality assurance and regulatory compliance management system within an organization by streamlining the processes and activities within Reporting Module. **IsoWare IWRM** enables companies to create a transparent environment for proactively define process improvement goals, measure the performance, analyze process metrics and data, improve processes, controls variances and verify successful implementation.

IsoWare IWRM supports multi-level role-based organizational models that maps to key roles needed for successful NC's, Six Sigma, 8-D, LEAN, 5S, SOX, and ISO implementation and management. The system drives cross-functional investigations and root cause analysis to identify areas of improvements. Program managers can create interactive reports linked directly to processes and projects with detailed action plans, interactive system based timelines and responsibilities.

User defined and template role based dashboards, control diagrams, Pareto charts, and scorecards provide the analytical framework essential for quality programs; all of which can be integrated into other systems and software. Operating within a strict audit environment, the management team can track, chart and analyze every aspect using the IsoWare Reporting Module.

Technology at work for you

(IWPM) Intelligence throughout the system enables any component to be securely integrated between processes, people and systems; offering visibility into each step of the process with a complete audit trail. Integration with other systems or other IsoWare modules is seamlessly accomplished with an unlimited scalability. **IWPM** process engine uses open and non-proprietary source, standards and formats. As with all IsoWare modules, **IWPM** has instantaneous distribution.

INCREASE EFFCIENCY THROUGH PROCESS MANAGEMENT

IsoWare Project Management Module (IWJM)

IWJM easily provides an overview of all projects and it effectively manages many roles directly on a real time basis. You can plan projects and share information with your employees, customers and partners. IWJM provides real time reporting, resource management, role management and task management that is an integrated solution for business project management.

IWJM allows multiple users to plan, schedule, share, track and report tasks, appointments, projects, business processes, and any company activities simultaneously through the system; via: Intranet, Internet SAAS, VPN or LAN. It is a tool for increasing company performance, effectiveness and productivity by better task management and team collaboration.

IWJM has the ability to track and manage tasks, roles, security, time, progress, users, and templates and give the users real time GANNT evaluations, role dependencies and deficiencies. The IWJM module interfaces with all other IsoWare module and easily integrates with other systems.

IsoWare Electronic Document Management Module (IWEDMS)

IsoWare EDMS is an innovative electronic document management system (EDMS) that solves the problems of managing, finding, and tracking documents in today's information intensive organizations.

To remain competitive in today's business environment, companies must continually strive to eliminate redundancy in their electronic records while also improving accessibility and management of sensitive company information. The process of constantly creating and revising different file types associated with different software applications can leave a company's electronic files in chaos. IsoWare's host of innovative features allows streamlining of document management processes and provides a powerful and easy to use solution to document and information disarray.

IsoWare EDMS offers an enterprise document repository that provides a single location from and to which all files are accessed and stored and accessible office wide, or globally with instant distribution. As a centralized enterprise system, there is no synchronizing required. In addition, through IsoWare's unmatched robust version control, obsolete and duplicate documents are not possible; all within a strict audit environment. IsoWare automatically preserves and tracks all previous versions, history, access, and edits to all of your documents and creates logs daily that include usernames, timestamps, remarks, version numbers, IP addresses.

IsoWare Pricing:
● Hosted version (IsoWare Servers) including all updates (from $996 per month).

● One year license (from $399 @ seat).

● Yearly maintenance, updates and hotline (non-leased systems) $2,711.

Consulting

We operate worldwide in all languages, providing businesses with a service partnership covering everything from assessment and certification to information, guidance and training.

Our services assist customers with quality, standards, streamlining, and increasing efficiency encompassing ISO 9001:20008, ISO 14001, ISO 18001, ISO 27001, ISO 25001(all ISO standards), 8D, LEAN Six Sigma, 5S, CAPPA and more.

Services

Our highly skilled team of validation and quality specialists, automation and industrial engineers, and IT and business analysts provide a range of compliance Consulting, Engineering and Contract Services, including:

* Regulatory compliance
* Pre- and post-audit assessment
* Audit services
* Quality system review
* Lean validation
* Process improvement and system remediation
* Project and program management

Based on years of experience with large companies we have developed a set of tools and methodologies that enable our expert staff to deliver ISO, Six Sigma, 8D, and Lean validation -- the systematic model we use to optimize our customers' validation processes. Our proprietary technology generates intelligent data that enables us to design and implement efficient process improvements in consultation with our customers.

IProcess Manager combines our multi-disciplined team of technology professionals, our extensive experience, industry best practices, and a unique methodology to deliver Lean Compliance to our customers.
